Principles and Practice of Lasers in Otorhinolaryngology and Head and Neck Surgery - V. Oswal 2014-01-24

Foreword In this era's informational paradigm, while pondering the considerations to be penned in this foreword, the relevance of a text such as this emerged progressively as the focal point. After all, for years, one established source for accessing large amounts of valuable information had been the Encyclopaedia Britannica, a printed tome, which is no longer relevant. Instant access to the latest scientific information is freely available to all with an internet. So, what can this text provide that cannot be readily accessed? In contemplating given topics, the Editors, as most certainly occurred in this publication, chose clinical authorities to author chapters in their areas of expertise. The experienced clinician often finds such a forum a unique opportunity to reflect on years of knowledge acquisition and then render an insightful discourse on the lineage of his/her current understanding of the topic. On the other side of the coin, the reader instantly acquires a knowledge base, which was validated with an exhaustive literature search and gains the senior authors' perspective of it. A less experienced author will benefit from thoroughly reviewing the currently available science and technology and moreover, gain experience in scientific writing. In the latter scenario the senior author is at once mentor and expert. Under ordinary circumstances, from the concept outline submission to a publisher, the time line to completion of the text is approximately one and a half to two years. Recruiting and assigning authors, awaiting late manuscript submissions and editing are unquestionably time consuming. Yet a passionate, dedicated Editor will take seemingly varied submissions and script them into a worthy finished product. Such was the case with this publication. The end result is a superbly structured text covering most of the concepts relating to the topic in a format that is both logical and

intuitive. At the risk of some redundancy, I share with you my thoughts on some of the significant number of new additions and improvements made to this second edition. The chapter on risk management is a welcome contribution. The rationale for the shift in the current decision tree for laryngeal cancer as it relates to macro versus micro margins, improvements in voice quality and the choice of initial therapeutic considerations are appropriately vetted. The rethinking of HPV associated malignancies is a new and most important addition. Zeitels' presentation of angiolytic lasers for benign and malignant pathology is state of the art. I particularly enjoyed reading about lasers and the association with tropical diseases. The chapters on robotic surgery, non-invasive cartilage reshaping and photo-diagnostics puts the latest technical innovation in our discipline into perspective. The excellent illustrations and photographs are a bonus. There are other areas that could be mentioned e.g. paediatrics, however, the aforementioned has more than adequately established the tenor of the text. In their quest to provide a one-stop knowledge base of a reference quality, it is inescapable that the size of the final proof would surpass the typical numbers of between four and five hundred pages for the hard bound volume. Tightening the text by removing some peripheral material would deprive the book its very objective of a reference quality publication. The obvious solution was to present the work in a set of two volumes, and the editors and the publishers have to be congratulated in achieving this seamlessly. The natural anatomical split provides the reader with a convenience of picking up the volume of relevance for the task at hand. An unusual feature is the inclusion of MCQs after each chapter, to serve as a test for recall of knowledge, the result of which can be assessed simply by going back to the chapter! The Editors and the publishers have exploited the now ubiquitous electronic media network to their advantage. Operating on various platforms a dedicated website will complement the book with updates, operative videos, and means of communication to share the knowledge globally. It was the focus of this brief foreword to explore the relevance of this text in the current informational climate. It provides the essential foundation for informed thought on this topic. Agree or disagree with the information contained within, the reader has acquired the knowledge to be able to do such. With this text you will be rewarded for sitting in your most comfortable chair, thumbing through the pages and sensing the new print. Immediately understood will be the time and effort it took to complete a text of this calibre. Read the chapters first that initially appeal to you and then without question you will read the remainder. This book should be in the library of any serious student of the subject. I feel privileged to have been asked to write the foreword. Marshall Strome

Beyond NATO - Michael E. O'Hanlon 2017-08-15

In this new Brookings Marshall Paper, Michael O'Hanlon argues that now is the time for Western nations to negotiate a new security architecture for neutral countries in eastern Europe to stabilize the region and reduce the risks of war with Russia. He believes NATO expansion has gone far enough. The core concept of this new security architecture would be one of permanent neutrality. The countries in question collectively make a broken-up arc, from Europe's far north to its south: Finland and Sweden; Ukraine, Moldova, and Belarus; Georgia, Armenia, and Azerbaijan; and finally Cyprus plus Serbia, as well as possibly several other Balkan states. Discussion on the new framework should begin within NATO, followed by deliberation with the neutral countries themselves, and then formal negotiations with Russia. The new security architecture would require that Russia, like NATO, commit to help uphold the security of Ukraine, Georgia, Moldova, and other states in the region. Russia would have to withdraw its troops from those countries in a verifiable manner; after that, corresponding sanctions on Russia would be lifted. The neutral countries would retain their rights to participate in multilateral security operations on a scale comparable to what has been the case in the past, including even those operations that might be led by NATO. They could think of and describe themselves as Western states (or anything else, for that matter). If the European Union and they so wished in the future, they could join the EU. They would have complete sovereignty and self-determination in every sense of the word. But NATO would decide not to invite them into the alliance as members. Ideally, these nations would endorse and promote this concept themselves as a more practical way to ensure their security than the current situation or any other plausible alternative.

I'll be Home Soon! - Patricia B. McConnell 2000

If you worry about leaving your dog home alone, both because you love your dog and your house, this book is for you. Most dogs can be left home alone during the day and lead happy, fulfilled doggy lives without destroying your house. Of course, some of them get into trouble at home when you're gone because there's so much fun stuff to do without you to stop them. But a small number of dogs suffer from a serious problem called Separation Anxiety, in which they panic at your departure and stay panicked until you return. This book is designed to help those whose dog really suffers from Separation Anxiety, to help you prevent it from developing, and to help you raise a dog with good house manners.

Loving Someone with Anxiety - Kate N. Thieda 2013-04-01

Dealing with an anxiety disorder is hard, but loving someone with an anxiety disorder can be equally as difficult. If your partner suffers from extreme anxiety, they may have panic attacks, constantly be voicing their worried thoughts, or may not be able to participate in social events because of a fear of social settings. No matter how compassionate you are, you may sometimes feel frustrated, unable to help, and even find your own life restricted—all of which can lead to conflict, resentment, miscommunication, and ultimately, an end to the relationship altogether. *Loving Someone with Anxiety* is one of the few books written specifically for the partners of people with anxiety disorders. The book is designed not only to aid you in helping your partner cope with anxiety and worry, but also to help you take care of your own needs. Inside, you'll learn the importance of setting healthy boundaries, limiting codependent behaviors, and why taking over roles that make your partner anxious—such as answering the phone, driving, or doing the grocery shopping because your partner feels too anxious to be in public—can be extremely damaging for the both of you. Codependency in relationships with an anxious partner can lead to resentment, anger, and a sense of helplessness on your side. This book will help you and your partner overcome these negative behaviors, build better communication and a stronger personal connection. Written by a licensed professional counselor who specializes in helping the partners of those with mental illnesses, this book is the resource that you have been looking for to help you understand your anxious partner and keep anxiety from sabotaging your relationship.

Business, Human Rights and the Environment - Chiara Macchi 2022

More than ten years after the adoption of the UN Guiding Principles on Business and Human Rights, this book critically reviews the achievements, limits and next frontiers of business and human rights following the protect, respect, remedy trichotomy. The UN Guiding

Principles acted as a catalyst for hitherto unprecedented regulatory and judicial developments. The monograph by Macchi proposes a functionalist reading of the states duty to regulate the transnational activities of corporations in order to protect human rights and adopts a holistic approach to the corporate responsibility to respect, arguing that environmental and climate due diligence are inherent dimensions of human rights due diligence. In the volume emerging legislations are assessed on mandatory human rights and environmental due diligence, as well as the potential and limitations of a binding international treaty on business and human rights. The book also reviews groundbreaking litigation against transnational corporations, such as Lungowe v. Vedanta or Milieudefensie v. Shell, for their human rights and climate change impacts. The book is primarily targeted at academic and non-academic legal experts, as well as at researchers and students looking at business and human rights issues through the lenses of legal studies (particularly international law and European law), political sciences, business ethics, and management. Additionally, it should also find a readership among practitioners working in the public or private sector (consultants, CSR officers, legal officers, etc.) willing to familiarize themselves with the expanding areas of liability, financial and reputational risks connected to the social and environmental impacts of global supply chains. Chiara Macchi is currently Lecturer in Law at Wageningen University & Research in The Netherlands.
