**The Tales of Swaggy Joe** - Kg. Lyle 2014-12-16

It all started in the 1970s when my own children were on the threshold of adulthood. The Roving Roo adventures were created around 1989 after a trip to the USA, where my daughter introduced me to a mascot named Kirby Kangaroo. Swaggy

Joe became the romantic character of my childhood—when itinerant workers still walked the roads. I have fond memories of some of them, notably an old timer of Bacchus Marsh, Victoria, named Brian Rice, who my Grandma Lyle employed in exchange for food and rudimentary accommodation in the back shed. Another was a chap named Ruben Webb, who my dad gave work to at our home. He worked well and then wandered his way. Great icons of honesty, integrity, and the freedom to live as they would were both of these men and others of their ilk. I recognize that the normal way of life for me as a child has slipped by as prosperity and technology altered what my grandchildren know as their way of life. I felt that it could assist the new generations if they could be given some insights into life as it once was before their time, albeit in romantic tales of the imagination. For me to express this, I found the lyric ballad came naturally to be the utility of sharing. Although untrained as a writer and

communicator, the urge to share a little of “what was” or “maybe was” prompted this little booklet. I hope that the readers, those young and those not so, enjoy the unique sharing reading provides.

**Irrigation Management Transfer** - Carlos Garces-Restrepo 2007

The present water report is the final product emanating from efforts by FAO, IWMI and others to document and understand the implications of the irrigation sector embarking on a wide reform process. It is intended to be a knowledge synthesis document that captures the global experiences emerging from a wide-reaching process targeting the reform of the irrigation sector. This study indicates that irrigation management transfer (IMT) is an approach for irrigation sector reform with the potential to improve the sustainability of irrigation systems. The process requires inter alia strong political commitment, negotiations among stakeholders, and long-term capacity development. Irrigation

management transfer should not be seen as a process that has a clear "beginning" and "end". While the former can be more easily identified, the latter is much more difficult to determine. In fact, IMT can be the initial stage of an evolving long reform process. The accompanying CD-ROM contains IMT country profiles and case studies, an international IMT e-mail conference, a bibliography and links.--Publisher's description.

The Science of Water - Enzo Levi 1995

In The Science of Water, Enzo Levi traces the scientific evolution of modern hydraulics, and reveals the gradual development of hydraulic concepts and theories over a 2,300-year period. Levi places prominent scientists in their

historical context, and reviews both successful and failed attempts to understand the perplexities of the physical behavior of water. Translated from the Spanish *El Agua Segun La Ciencia* and written in straightforward language, *The Science of Water* accomplishes a difficult objective. It achieves a balance between history and science, idea and understanding, failure and success, and imagination and creativity. *The Science of Water* facilitates the strengthening of knowledge, the learning of concepts not traditionally taught, and the building of self-confidence and insight to observe and explain phenomena in original ways. Major and minor

achievements in all branches of hydraulics are examined, as chapters illustrate how erroneous concepts were originated and transferred from one scientist to another. Bidone's discovery of hydraulic jump and its use by Venturi; Torricelli's principle; the evolution of the "Navier-Stokes equation;" Thomson's vortex atom; and Newton's theories on velocity and resistance are just a few of the areas covered. In a separate chapter, Levi discloses Leonardo da Vinci's fascination, observations, and theories on water and its power as "the driver of nature." *American Recycler April 2008* -
