Cuspid Volume 1 - John Laszlo 2018-08-01
CUSPID - Clinically Useful Safety Procedures in Dentistry: Volume 1 and Volume 2. This clinically oriented and illustrated textbook of over 1,600 pages published on the 1st August 2018 to coincide with the General Dental Council's introduction of Enhanced CPD for all

dental registrants; now provides every member of the dental team with the means to easily undertake and complete ECPD in line with the GDC's requirements for outcome C: Developing and maintaining knowledge and skills in dental practise. In the two volumes of CUSPID: Five safety critical subject areas are systematically

presented: CUSPID Volume 1: Chapter 1: Medical Emergencies. Chapter 2: Medicine and Drug Safety. CUSPID Volume 2: Chapter 3: Infection Control. Chapter 4: Radiation Safety. Chapter 5: Oral Cancer. All GDC registrants from the vocational trainee, to the experienced practice principal leading a clinical team can use the 2 volumes of CUSPID to complete their ECPD. Furthermore, the essential roles of all dental care professionals are comprehensively recognized in this textbook. Dental colleagues who are certainly well-experienced but at times under-appreciated and often over-worked; nurses, technicians, therapists and hygienists can use CUSPID to achieve their ECPD goals. By answering the 650 multiple choice questions and participating in Peer Review, some 80 hours of ECPD can be claimed and verified by completing the certificates and log sheets at the end of each of the 5 chapters. For dentists, this forms the core of the ECPD required by the GDC: 80 hours out of the 100 hours required in the 5 year ECPD

cycle. For other dental registrants, by using CUSPID; the ECPD achieved can significantly exceed the 75 hours required for clinical technicians, hygienists and therapists, or the 50 hours required for technicians and nurses to complete their respective 5 year ECPD cycles, securing their registration with the GDC. Carrying out the reflective reviews at the end of each chapter forms the foundation upon which a Professional Development Portfolio can be based, adding further to the ECPD totals which can be gained from CUSPID. In addition to ECPD, learning from CUSPID provides an opportunity to achieve a solid working knowledge of the safety critical disciplines required for safe clinical practise. Using both volumes of CUSPID ensures you are not only working safely, you are doing so in accordance with the most recent evidence based clinical guidelines; in line with the GDC's requirements for ECPD for every dental professional from August 1st 2018 onwards.

Fundamentals of Pharmacology for Children's Nurses - Ian Peate 2021-12-28

Registered Nurses must have thorough knowledge of pharmacology, medicines administration, and the effects of medicines. Fundamentals of Pharmacology for Children's Nurses is written for nurses and allied health professionals involved in the care of children and young people (CYP) to focus exclusively on pharmacology. Filling a gap in current literature on the subject, this much-needed resource develops the competence and confidence required to prescribe, dispense, and administer medicines to children and young people. Emphasising the importance of patient-centered care to CYP, the text describes the role of the healthcare provider working with CYP and their families; explains how to use pharmaceutical and prescribing reference guides; discusses legal and ethical issues; examines pharmacodynamics and pharmacokinetics, and more. Helping readers respond appropriately and

compassionately to the needs of those receiving care and their families, this textbook: Covers a wide range of medications used in diabetes, cancer, mental health, and other areas Features a wealth of full-colour images and numerous pedagogical tools including learning objectives, self-test questions, and reflective exercises to enable readers to contextualise and assess their knowledge Presents case studies to reinforce learning, and illustrate the application of theory to practice Provides authoritative and practical guidance on formulations, adverse drug reactions, analgesics, antibiotics, immunisations, and the medications most commonly used when providing care to CYP Includes access to a companion website with interactive MCQs, case studies, references, an image bank, and links to further reading and supplemental resources Fundamentals of Pharmacology for Children's Nurses is essential reading for undergraduate children's nursing students, trainee nursing associates, those undertaking healthcare

programmes of study, as well as those seeking to better understand pharmacology.

Single Best Answer Questions for the Final FFICM - Keith Davies 2016-12-22

This is the first dedicated revision aid for the Single Best Answer component of the Final FFICM, added to the written examination in July 2014. It contains 240 SBA practice questions, divided into eight papers covering the Faculty of Intensive Care Medicine curriculum. Each answer consists of a short explanation, allowing a quick review of the correct answer, and a long explanation, providing a more in-depth discussion of the question topic. All answers are also fully referenced, encouraging further reading and providing sources for more detailed study. In combination with the companion volume, Multiple True False Questions for the Final FFICM, this guide allows readers to access full written mock exams in the style and format of the official FFICM examination, and is an invaluable resource for trainees in intensive care

medicine.

Translating and Transmediating Children's Literature - Anna Kérchy 2020-09-30

From Struwwelpeter to Peter Rabbit, from Alice to Bilbo—this collection of essays shows how the classics of children's literature have been transformed across languages, genres, and diverse media forms. This book argues that

translation regularly involves transmediation—the telling of a story across media and vice versa—and that transmediation is a specific form of translation. Beyond the classic examples, the book also takes the reader on a worldwide tour, and examines, among other things, the role of Soviet science fiction in North Korea, the ethical uses of Lego Star Wars in a Brazilian context, and the history of Latin translation in children’s literature. Bringing together scholars from more than a dozen countries and language backgrounds, these cross-disciplinary essays focus on regularly overlooked transmediation practices and terminology, such as book cover art, trans-sensory storytelling, écart, enfreakment, foreignizing domestication, and intra-cultural transformation.

provides up-to-date information on the core content of child nursing courses and helps students understand how it applies to practice. Covering all settings throughout, including the acute and community ones, it focuses on the importance of child and family centred care, by having them directly involved through the use of voices and case studies. This book provides a comprehensive framework for student knowledge development by including: Activities and theory stop-points to encourage students to develop their critical thinking skills Pointers to further reading resources, including journal articles and videos for students to explore and build knowledge more independently A range of online resources including extra scenarios for lecturers to use in their teaching and MCQs for students to revise. This is essential reading for undergraduate nursing students specialising or wanting to specialise in children and young people nursing.

Paediatric Dentistry for the General Dental

Practitioner - Sondos Albadri 2021-06-14

This book is a practical, comprehensive guide to the management of children and adolescents in general dental practice. A logical, evidence-based approach to oral health is adopted throughout. The commonly encountered oral and dental problems and their diagnosis and treatment are covered in detail, with particular attention to dental caries, dental trauma, developmental anomalies, periodontal problems, and soft tissue conditions. Up-to-date guidance is provided on history taking, dental examination, preventive strategies and advanced behaviour management. In addition the relevance of common medical conditions to dental management is discussed. The book is divided into four sections, each of which focusses on a specific age group, helping the reader to relate clinical issues to the different dental developmental stages. The readily understandable text is supported by many informative colour illustrations and diagrams.

Pharmacology Case Studies for Nurse Prescribers - Alan 2021-04-26

This new edition of the popular Pharmacology case studies for nurse prescribers has been thoroughly revised in the light of the latest research and guidance from NICE, the British National Formulary (BNF), the Royal Pharmaceutical Society, the Nursing and Midwifery Council and the Royal College of Nursing. While the first edition was aimed at students undertaking the non-medical prescribing modules, this updated text has broadened its scope and is relevant to all trainee and qualified nurse prescribers. There are new and additional chapters on pregnancy and breastfeeding, sexual health and contraception, and prescribing for frailty syndrome in the elderly. The latest developments in pharmacology (such as the emergence of biosimilar drugs) are included in the text; and all the chapters from the first edition have been revised and updated by expert healthcare

practitioners. Meanwhile, the practical approach and helpful features that made the first edition so popular remain unchanged. The authors offer a basic introduction to pharmacological concepts, embedded in specific conditions, through case studies and self-assessment questions. By utilising a case study approach, they enable the reader to link pharmacological concepts with clinical practice. Reading this book, and carrying out the numerous self-assessment activities, will give the reader an appreciation of the value of having a sound pharmacological knowledge base in order to deliver safe practice, effective prescribing and improved patient care. Praise for the first edition: 'A useful and practical accompaniment for those studying nurse prescribing, this textbook is also a valuable resource for practitioners qualified in this extended role and those who prescribe and administer medications daily.' Valerie McGurk, Practice Development Nurse, Nursing Management 'This book is a

comprehensive collection of case studies on a number of conditions, from heart failure to eye problems.' Lynda Gibbons, Registered Advanced Nurse Practitioner, Emergency Nurse

Handbook of Drug Administration via Enteral Feeding Tubes, 3rd edition - Rebecca White 2015-03-11

EBOOK: Perioperative Practice Case Book - Hannah Abbott 2016-08-16

This case book is the ideal text for Operating Department Practitioners (ODPs), as well as student ODPs and nurses preparing to work in perioperative care. Delivering individualised, holistic and evidence-based care can be challenging in the perioperative setting, requiring the practitioner to apply specialist clinical knowledge to each individual patient. This text presents 20 interactive case studies

that will support the reader in assimilating a wide range of professional knowledge in order to develop a comprehensive plan of care for patients they encounter. The practical cases:

- Demonstrate how care will vary depending on the patient's physiological assessment and their personal, social, cultural and emotional needs
- Will consolidate the reader's learning around pathophysiology, pharmacology, assessment skills and clinical skills
- Include common clinical procedures as well as those that are more complex and require a deeper analysis of the evidence in order to improve patient care.
- Use "Stop and Think" boxes to encourage readers to reflect on key points within the case study, in order to develop their own knowledge and assist in their CPD

This text will support all learners, at both pre- and post-registration level as they develop their knowledge of perioperative care. Its goal is to help the practitioner deliver excellent and confident care in perioperative practice and in other healthcare settings.

“Although clearly targeted at the student Operating Department Practitioner, Abbott and Wordsworth have produced a learning resource that any learner in the perioperative environment will find both informative and a useful learning aid. The editors have set out the twenty patient case studies in a sequence that allows the student to work through them as their course and competence progresses, although students can dip into the case studies in any order that supports their current clinical placement. The section introducing perioperative care is essential reading for any perioperative practitioner, with an up-to-date introduction to the latest concepts of teamwork and human factors in patient safety. Coupled with the patient-centred focus of the case studies this provides any reader with an understanding of the changing approach to patient care in the perioperative environment.” Bill Kilvington, President, College of Operating Department Practitioners, UK “I have read this

book several times and found that the chapter contents are excellent. This book will be useful for ODPs and theatre nurses, it will enhance their knowledge and skills and may also enhance their abilities to work in operating departments and care well for patients. The book covers preoperative care, intraoperative care and postoperative care which is essential for all practitioners working in operating departments. The content of this book is very informative and will be of great use to both students and qualified practitioners. I find it very impressive and I envisage it to be very useful to all theatre practitioners!” Paul Wicker, formerly Head of Perioperative Studies, Edge Hill University, UK and Visiting Professor, Nanjing University, China.

Oxford Textbook of Palliative Care for Children - Richard Hain 2021-03-24

The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the *Oxford Textbook of Palliative Care for Children* brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for

the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.

Gastroesophageal Reflux in Children - Yvan Vandenplas 2022-07-25

This extensively revised second edition of this essential work provides a comprehensive overview of Gastroesophageal Reflux (GER) in children. It contains detailed insight into the epidemiology and pathophysiology of the condition. Relevant diagnostic methods and treatment techniques are also covered. Heavily revised chapters discuss issues associated with GER in special patient populations and current approaches to GER diagnosis and management. New chapters cover relevant aspects of the microbiome, how nutrition can be key to successful treatment and the adverse effects of the latest therapeutic drugs presently available. Colic in infants, and differential diagnoses in eosinophilic esophagitis are also described. The first part of the book is dedicated to introducing the condition, discussing epidemiology, symptoms and diagnosis. This is followed by addressing issues of the condition encountered

in special patient populations such as in preterm infants, apnea, neuroloric patients and cystic fibrosis, among others. The final part of the book is dedicated to therapeutic approaches from medication to surgery and alternative approaches such as complementary medicine and hypnotherapy. The approaches and challenges in endoscopy are also detailed.

Gastroesophageal Reflux in Children, Second Edition is edited by a leading world expert in the topic and written by a global team of authors from a range of associated disciplines, making the work a critical resource for pediatricians, gastroenterologists to pulmonologists, otolaryngologists and neurologists.

references and videos

Children Born of War - Sabine Lee 2021-07-27

This volume presents research from an international, interdisciplinary, and intersectoral research project in which 15 doctoral researchers explored a range of issues related to the life-course experiences of children born of war in 20th-century conflicts. Children Born of War (CBOW), children fathered by foreign soldiers and born to local mothers during and after armed conflicts, have long been neglected in the research of the social consequences of war. Based on research projects completed under the auspices of the Horizon2020-funded international and interdisciplinary research and training network CHIBOW (www.chibow.org), this book examines the psychological and social impact of war on these children. It focusses on three separate but interrelated themes: firstly, it explores methodological and ethical issues related to research with war-affected populations in general and children born of war

in particular. Secondly, it presents innovative historical research focussing specifically on geopolitical areas that have hitherto been unexplored; and thirdly, it addresses, from a psychological and psychiatric perspective, the challenges faced by children born of war in post-conflict communities, including stigmatisation, discrimination, within the significant context of identity formation when faced with contested memories of volatile post-war experiences. The book offers an insight into the social consequences of war for those children associated with the 'enemy' by virtue of their direct biological link.

on prescribing practice in mental health, including drug choice, treatment of adverse effects and how to augment or switch medications. The text covers a wide range of topics including pharmacological interventions for schizophrenia, bipolar disorder, depression and anxiety, and many other less common conditions. There is advice on prescribing in children and adolescents, in substance misuse and in special patient groups. This world-renowned guide has been written in concise terms by an expert team of psychiatrists and specialist pharmacists. The Guidelines help with complex prescribing problems and include information on prescribing psychotropic medications outside their licensed indications as well as potential interactions with other medications and substances such as alcohol, tobacco and caffeine. In addition, each of the book's 165 sections features a full reference list so that evidence on which guidance is based can be readily accessed. This important text: Is the

world's leading clinical resource for evidence-based prescribing in day-to-day clinical practice and for formulating prescribing policy Includes referenced information on topics such as transferring from one medication to another, prescribing psychotropic medications during pregnancy or breastfeeding, and treating patients with comorbid physical conditions, including impaired renal or hepatic function. Presents guidance on complex clinical problems that may not be encountered routinely Written for psychiatrists, neuropharmacologists, pharmacists and clinical psychologists as well as nurses and medical trainees, The Maudsley Prescribing Guidelines in Psychiatry are the established reference source for ensuring the safe and effective use of medications for patients presenting with mental health problems.

Care of the Child with Ophthalmic Problems

- Mary E Shaw 2016-02-29

Paediatric care has changed dramatically in the last few years and this has affected the care and

management of ophthalmic patients. Babies and children with ophthalmic problems are often cared for by registered children's nurses in specialist children's hospitals. However, some of these nurses may lack the required ophthalmic knowledge and expertise. Likewise, paediatric patients are also often cared for in ophthalmic environments, where the ophthalmic nurses don't necessarily possess the same level of paediatric knowledge as their colleagues in children's hospitals. This useful, comprehensive book bridges the gap, presenting the core information required by both groups: paediatric nurses who care for ophthalmic patients, and ophthalmic nurses who look after children in their practice. Contents include:

- Working with the child and their family
- Development of the eye and vision
- Gross anatomy and physiology of the eye and adnexa
- Assessment of vision and eye movement
- Examination of the eye and adnexa
- Eye conditions, inherited and acquired
- Eye emergencies
- Eye drops and ointment

Optimizing Treatment for Children in the Developing World - Stuart MacLeod

2015-05-12

This book is intended to communicate current best practice in pediatric clinical pharmacology and clinical pharmacy with special consideration of the prevailing circumstances and most pressing needs in developing countries. It also addresses measures that may be taken in countries with emerging economies through organizational and political adjustments to reduce unacceptable levels of morbidity and mortality among children and pregnant women with treatable diseases.

Children and Young People's Mental Health - Tim McDougall 2016-10-04

Children and Young People's Mental Health equips nurses and healthcare professionals with the essential skills and competencies needed to

deliver effective assessment, treatment and support to children and young people with mental health problems and disorders, and their families. Drawing on McDougall's Child and Adolescent Mental Health Nursing and taking the Cavendish Report and Willis Commission into account, this new textbook has been designed to ensure those working in CAMHS can continue to provide a high quality, evidence-based service. The book explores best practice in a variety of settings and addresses issues such as eating disorders, self-harm, ADHD, forensic mental health issues and misuse of drugs and alcohol in children and young people, as well as child protection, clinical governance, safeguarding and legal requirements. Furthermore, with young people contributing directly to several chapters, the book reflects the importance of involving them in planning, delivering and evaluating CAMHS services. It is essential reading for all health and social care professionals and students working with

children and young people, particularly those working in specialist child and adolescent mental health settings.

Considering the Patient in Pediatric Drug Development - Klaus Rose 2020-11-19

Considering the Patient in Pediatric Drug Development: How Good Intentions Turned into Harm addresses a fundamental challenge in drug development and healthcare for young patients. In clinical trials and clinical practice, the term "children" is used ambiguously to confer physiological characteristics to a chronological age limit, which in reality does not exist. This book outlines why the United States

(US) and European Union's (EU) regulatory authorities, pediatric academia, and the pharmaceutical industry demand, support and perform pediatric drug studies, along with the key flaws of this demand that blurs the different administrative and physiological meanings of the term "child." In addition, the book covers why most pediatric regulatory studies lack medical sense and many even harm young patients and the conflicts of interest behind pediatric drug studies. It includes relevant information about the maturation of the human body regarding absorption, distribution, metabolism and excretion of food and drugs as well as key differences between newborns, infants, older children and adolescents. Explains relevant information about the maturation of the human body regarding absorption, distribution, metabolism and excretion of food and drugs, including key differences between newborns, infants, older children and adolescents Discusses historical roots of separate drug approval in

officially labeled "children" and conflicts of interest in performing and publishing "pediatric" research Helps to decipher justifications for pediatric studies to help people navigate the relevance of the information
