Classroom Pivotal Response Teaching for Children with Autism - Jessica Suhrheinrich 2011-08-01

"Classroom Pivotal Response Teaching, or CPRT, was developed to help meet the educational needs of young children with autism. CPRT (originally called Pivotal Response Training or Treatment) is a form of naturalistic behavioral intervention, based on the principles of applied behavior analysis (ABA), and is soundly supported in the scientific literature. This manual will describe the components of CPRT and how to implement the approach in your classroom. Although this manual is geared primarily toward preschool through grade 3 teachers, CPRT strategies can be used by a variety of professionals. Speech and language pathologists, occupational therapists, behavior specialists, psychologists and other teaching professionals may all find CPRT a

valuable strategy. Additionally, the techniques in this manual may be useful with typically developing children and those with a variety of special needs. Most children can benefit from this structured, systematic approach that utilizes naturally occurring teaching opportunities. One of the strengths of this approach is that it is adaptable to a wide range of teaching goals and service settings. All who teach are encouraged to integrate CPRT into their existing strategies as often as possible"-- Provided by publisher.

Teaching the Basics of Theory of Mind - Kirstina Ordetx 2014-09-21

This manual contains a 12-week curriculum designed to incorporate a multi-sensory approach to developing the critical and basic aspects of Theory of Mind (ToM). The activities are designed to be used with children aged 5-9, who have been diagnosed with an Autism Spectrum Disorder (ASD) or who have related social challenges. By building on Cognitive Behavioural Therapy principles, this book shows how teaching ToM to young children can help them to better understand the emotions and actions of people around them. This curriculum has been designed to enhance the development of ToM and subsequently enhance social

understanding in children who demonstrate challenges with pre-requisite skills that lead to successful social relationships and situations. As well as practical advice and supplementary materials such as worksheets and cut-out-and-use flash cards, this book includes reinforcement activities to be carried out at home with parents and care givers. Written by Dr Kirstina Ordetx, an experienced Developmental Psychologist and CBT specialist, this book is essential reading for teachers and other professionals working with children with ASDs and related social difficulties, including SENCOs, behavioural therapists, speech and language therapists and occupational therapists, wanting to explore the benefits that ToM can bring to pre-adolescent children.

Colour Coding for Learners with Autism - Adele Devine 2014-04-21

Children on the autism spectrum are often highly visual learners, making colour a powerful and motivating learning tool. This book explains how colour coding helps young people with autism to generalise lessons already learnt. For example, assigning the colour aqua to all personal care activities or the colour purple to timetabling and transitions establishes clear, visual categories. This allows children to draw on learnt experiences, which creates a sense of order, reduces anxiety, and can aid communication, understanding emotions, organisation, coping with change and diversifying diet. A wealth of tried-and-tested printable resources to enable the practical application of colour coding in the classroom and at home are included on a CD-ROM. With colourful illustrations and resources, Colour Coding for Learners with Autism is an effective, must-have teaching tool for anyone involved in the education of young people with autism.

Handbook of Early Intervention for Autism Spectrum Disorders - Jonathan Tarbox
2014-04-04

Current rates of autism diagnoses have been cause for concern and research as well as rumor and misinformation. Important questions surround the condition: how early can an accurate diagnosis be made? At what age should intervention start? How can parents recognize warning signs? And what causes autism in the first place? There are no easy answers, but the Handbook of Early Intervention for Autism Spectrum Disorders gives researchers, practitioners, and academics the science and guidance to better understand and intervene. Background chapters survey the history of professional understanding of the disorders and the ongoing debate over autism as a single entity or a continuum. Chapters on best methods in screening, assessment, and diagnosis reflect the

transition between the DSM-V and older diagnostic criteria. And at the heart of the book, the intervention section ranges from evidence-based strategies for developing core skills to ethical concerns, cultural considerations, and controversial treatments. Included in the Handbook's broad-based coverage: Designing curriculum programs for children with autism spectrum disorders (ASD). Mainstream education for children with ASD. Teaching independent living skills to children with ASD. Social skills and play. Behavioral and mental health disorders in children with ASD. Training and supporting caregivers in evidence-based practices. Teaching cognitive skills to children with ASD. The Handbook of Early Intervention for Autism Spectrum Disorders is a comprehensive reference for researchers, professors, and graduate students as well as clinicians and other scientist-practitioners in clinical child and school psychology, child and adolescent psychiatry, social work, rehabilitation, special education, and pediatric medicine.

Caring for a Child with Autism - Martine Ives

Homeschooling the Child with Autism - Patricia Schetter 2009-03-30

Homeschooling the Child with Autism This practical, highly accessible guide answers parents' and professionals' questions about teaching children with autism spectrum disorders at home. The book helps parents decide whether to homeschool and guides them through the process of beginning and maintaining an effective homeschool program. All the essential questions are addressed, such as: How do you know if homeschooling is right for you and your child? Which homeschool program is best for the child's learning style and needs? How should a family get started? What is the best way to address social, behavioral, and organizational skills when teaching a child with ASD? When should you transition back to a traditional public school setting? The book also

contains tips and suggestions from real-life parents who have successfully homeschooled their children with ASD and includes lists of helpful resources for homeschoolers. *Praise for Homeschooling the Child with Autism* "Practical advice and a wealth of resources....This book provides a beacon of hope to families struggling with educational options for their child." —SALLY OZONOFF, PH.D., endowed professor, University of California, Davis, M.I.N.D. Institute "A must-read for parents and teachers who need guidance and encouragement while teaching children with ASD." —CATHY STENZEL, mother of a son with autism

See It Feelingly - Ralph James Savarese 2018-10-12

"We each have Skype accounts and use them to discuss [Moby-Dick] face to face. Once a week, we spread the worded whale out in front of us; we dissect its head, eyes, and bones, careful not to hurt or kill it. The Professor and I are not whale hunters. We are not letting the whale die. We are shaping it, letting it swim through the Web with a new and polished look."—Tito Mukhopadhyay Since the 1940s researchers have been repeating claims about autistic people's limited ability to understand language, to partake in imaginative play, and to generate the complex theory of mind necessary to appreciate literature. In *See It Feelingly* Ralph James Savarese, an English professor whose son is one of the first nonspeaking autistics to graduate from college, challenges this view. Discussing fictional works over a period of years with readers from across the autism spectrum, Savarese was stunned by the readers' ability to expand his understanding of texts he knew intimately. Their startling insights emerged not only from the way their different bodies and brains lined up with a story but also from their experiences of stigma and exclusion. For Mukhopadhyay Moby-Dick is an allegory of revenge against autism, the frantic quest for a cure. The white whale represents the autistic's baffling, because wordless, immersion in the sensory. Computer programmer and cyberpunk author Dora Raymaker skewers the empathetic failings of the bounty hunters in Philip K. Dick's *Do Androids Dream of Electric Sheep?* Autistics, some studies suggest, offer instruction in embracing the nonhuman. Encountering a short story

about a lonely marine biologist in Antarctica, Temple Grandin remembers her past with an uncharacteristic emotional intensity, and she reminds the reader of the myriad ways in which people can relate to fiction. Why must there be a norm? Mixing memoir with current research in autism and cognitive literary studies, Savarese celebrates how literature springs to life through the contrasting responses of unique individuals, while helping people both on and off the spectrum to engage more richly with the world.

Our Brains Are Like Computers! - Joel Shaul 2016-01-21

This highly visual social skills book uses computer metaphors and visual diagrams to help children on the autism spectrum to understand how their words and actions can affect other people. Easily identifiable computing and social networking metaphors are used to explain how memories are saved in the brain, like files in computer folders, and how, just as files can be shared and downloaded on the internet, people learn about you by sharing their positive and negative impressions with each other. The author explains why certain actions may be 'liked' or 'disliked' by others, and offers guidance on appropriate and inappropriate social behavior. This book also features photocopiable worksheets to reinforce the guidance and lessons offered in the book.

Stress and Coping in Autism - M. Grace Baron 2006

Publisher description

Ten Things Every Child with Autism Wishes You Knew - Ellen Notbohm 2005

Explores ten important characteristics that provide a window into the hearts and minds of children with autism.

A Mind Apart - Peter Szatmari 2011-07-19

Why would a child refuse to talk about anything but wasp wings-or the color of subway train doors? What does it mean when a nine-year-old asks questions about death hundreds of times a day? And how can parents build a close relationship with a little girl who hates to be touched? In this compassionate book, leading autism authority Dr. Peter Szatmari shows that children with autism spectrum disorders act the way they do because they think in vastly different ways than other people. Dr.

Szatmari shares the compelling stories of children he has treated who hear everyday conversation like a foreign language or experience hugs like the clamp of a vise. Understanding this unusual inner world-and appreciating the unique strengths that thinking differently can bestow-will help parents relate to their children more meaningfully, and make the "outer world" a less scary place.

Soon Will Come the Light - Thomas A. McKean 1994

Winner of the Autism Society of America's Literary Achievement Award, this heartwarming book was one of the first autobiographies to provide unique insight into the world of autism. Tom McKean grew up in a confusion of misdiagnosis, spending years in an institution and finally journeying into adulthood, seeking answers. He finally comes to a "working truce" with the neurotypical world and discovers he has various talents in fields such as computers and technical design, in addition to his passion for writing. His challenges, discoveries, and successes will move you as his poetry, songs, and humor delight you. Helpful chapters include: Leave My Home for a Home Interesting Associations in the Home I Re-Enter the World Discovering Autism What Autism Is To Me Professionals and More Ideas on Autism

Understanding Other Minds - Simon Baron-Cohen 2013-08-22

This book comprises 26 exciting chapters by internationally renowned scholars, addressing the central psychological process separating humans from other animals: the ability to imagine the thoughts and feelings of others, and to reflect on the contents of our own minds a theory of mind (ToM). The four sections of the book cover developmental, cultural, and neurobiological approaches to ToM across different populations and species. The chapters explore the earliest stages of development of ToM in infancy, and how plastic ToM learning is; why 3-year-olds typically fail false belief tasks and how ToM continues to develop beyond childhood into adulthood; the debate between simulation theory and theory theory; cross-cultural perspectives on ToM and how ToM develops differently in deaf children; how we use our ToM when we make moral judgments, and the link between emotional intelligence and ToM; the neural basis of ToM measured by evoked response potentials,

functional magnetic resonance imaging, and studies of brain damage; emotional vs. cognitive empathy in neuropsychiatric conditions such as autism, schizophrenia, and psychopathy; the concept of self in autism and teaching methods targeting ToM deficits; the relationship between empathy, the pain matrix and the mirror neuron system; the role of oxytocin and fetal testosterone in mentalizing and empathy; the heritability of empathy and candidate single nucleotide polymorphisms associated with empathy; and ToM in non-human primates. These 26 chapters represent a masterly overview of a field that has deepened since the first edition was published in 1993.

Talkabout Theory of Mind - Katherine Wareham 2020-04-07

Theory of mind is a key consideration in autism spectrum conditions and is frequently associated with social, emotional, behavioural and mental health difficulties. The latest practical workbook in the TALKABOUT series, this book is designed to support those for whom theory of mind does not come naturally. It teaches strategies that can be used to identify others' thoughts and feelings based on their behaviour, as well as to adapt behaviour in order to competently manage social situations and have positive interactions. With fully illustrated activities covering topics such as thoughts, feelings and actions, knowledge and beliefs, and respect, the programme outlined in this book can be used with children and young people to develop and confidently implement an awareness of theory of mind. Key features include: Assessments, targets, lesson plans and over ninety activities to support theory of mind. Structured activities which progress from simple concepts to more complex skills. Opportunities for skills to be practised and recapped. Fully photocopiable and downloadable resources. Packed full of flexible activities to suit different levels and ages, this is a vital resource for educators and therapists looking to support children and young people with poor theory of mind as they develop the skills necessary to create positive interactions.

Groupwork for Children with Autism Spectrum Disorder Ages

11-16 - Christina Howe 2018-10-24

This book includes a short, easy-to-read theoretical background to ASD focusing on the underlying impairments and their impact on sensory processing, motor development, play, language and communication skills, social skills, emotional development and behaviour for the relevant age group. Each developmental area is intrinsically linked and progress in one aspect of development is dependent on progress in another so a multi-disciplinary approach is essential. All the books examine the role of various individual professionals while emphasising the need to develop a multi-disciplinary approach combining their areas of expertise. The book also describes a multi-disciplinary approach to groupwork providing

practical advice and photocopiable resources to enable readers to: assess individual needs; organise groups (including group members, venue and transport); set individual group targets; plan group sessions (examples of activities for each developmental area are provided); and, evaluate progress. It offers ideas for developing good teamwork, including peer review, and working towards a trans-disciplinary approach where professionals can step into each others' roles where appropriate. This title features 256pp, A4, and it is wire-o-bound. It is suitable for children of ages 11-16.

Developing Social Skills - Sue Larkey 2010

How to Live with Autism and Asperger Syndrome - Chris Williams 2004

This accessible introduction to caring for a child with autism is an ideal resource for the families of children with Autism Spectrum Disorders as well as for the professionals who work with them. In clear and simple language and with many illustrations, the authors explain the nature of this condition and its variations, and tackle common problems experienced in everyday activities such as eating, sleeping and going to the toilet. They also suggest strategies for coping with aggression and tantrums, approaches to preoccupations and compulsions, and suggest ways in which to improve communication and social skills. Based on up-to-date research and using many case examples, the authors consider each problem and its causes step by step, and suggest a number of solutions.

The Educator's Guide to Teaching Students With Autism Spectrum Disorders - Josefa Ben-Arieh 2009-03-18

Thinking in Pictures, Expanded Edition - Temple Grandin 2008-12-24 Updated for a new era, the 25th anniversary edition of this seminal work on autism and neurodiversity provides "a uniquely fascinating view" (Deborah Tannen, author of You Just Don't Understand) of the differences in our brains. Originally published in 1995 as an unprecedented look at autism, Grandin writes from the dual perspectives of a scientist and an autistic person to give a report from "the country of autism." Introducing a groundbreaking model which analyzes people based on their patterns of thought, Grandin "charts the differences between her life and the lives of those who think in words" (The Philadelphia Inquirer). For the new edition, Grandin has written a new afterword addressing recent developments in the study of autism, including new diagnostic criteria, advancements in genetic research, updated tips, insights into working with children and young people with autism, and more.

Autism: Mind and Brain - Uta Frith 2004-01-15

Autism is a neurodevelopmental disorder that allows a unique window on the relationship between mind and brain. The study of autism provides insight into the brain basis of the complex social interactions typical of human beings, since a profound impairment in social interactions is the hallmark of autistic disorders. While autism was first described almost 60 years ago, research into its cognitive and neurophysiological basis has intensified over the last two decades. Autism: Mind and Brain provides a

comprehensive overview of currently conducted experiments, which are guided by bold theories that are being tested rigorously. With contributions from international leaders in autism research, the book focuses on new ideas and findings that are gradually influencing our understanding of autism and its variants. These new approaches include the use of functional and structural brain imaging studies as well as novel behavioural measures. Together they demonstrate significant advances in knowledge and testify to the development and integration of current cognitive theories of autism. The application of these new and sophisticated approaches forge a path forward for future autism research, and present powerful new insights into this fascinating and still puzzling disorder.

1001 Great Ideas for Teaching and Raising Children with Autism Or Asperger's - Ellen Notbohm 2010

A source of practical advice for parents, teachers, and carers of children on the autism spectrum, which offers positive strategies for dealing with a range of issues.

Theory of Mind and the Triad of Perspectives on Autism and Asperger Syndrome - Olga Bogdashina 2006

Inspired by the often uncomfortable interplay between autistic individuals, parents and professionals in understanding autistic spectrum conditions, Olga Bogdashina uses the concept of Theory of Mind (ToM) to consider these groups' different (and often conflicting) perspectives. ToM is the ability to imagine and make judgements about what others feel and think; its absence in autistic individuals is called 'mindblindness'. This book addresses the 'mindblindness' of people united in their interest in autism but divided by their different angles and perspectives. Divided into four parts, the book first defines autism, then the views of the three main groups working with it - autistic individuals, parents and

professionals - under the headings of classifications, diagnosis, causes, development, theories and treatment. By comparing and reconciling the different perspectives in this way, the book helps each group to understand and predict each other's responses and behaviours. This enlightening and innovative book offers a unique way of 'stepping in each other's shoes' and is a valuable resource for all people living or working with autism.

A Land We Can Share - Paula Kluth 2008

The how and why of teaching literacy skills to children with autism

The Autistic Brain - Temple Grandin 2013

Offers the latest research and science on autism, including new neuroimaging and genetic research that provide new theories on what causes autism spectrum disorders as well as new ways to treat and diagnose them.

Teaching Children with Autism to Mind-Read - Patricia Howlin 2004-12

It is now established that difficulties in understanding other people's minds underlie many of the social and communication problems that are characteristic of autism. This book offers practical teaching materials for the practitioner in the field, exploring the relationship of 'theory of mind' deficits to social and communication problems in children with autism. Based on their successful experimental work, the authors provide a detailed intervention programme, with accessible teaching materials to help autistic children improve their understanding of beliefs, emotion and pretence. The improved and expanded second edition now incorporates two books; a practitioner's guide that covers the up to date theory and background to the approach, and a print and electronic workbook (0470093242) that can be used with children, or by young people and adults, as a learning tool.
