What Is This Thing Called the Meaning of Life? - Stewart Goetz 2020

What are we asking when we ask, "What is the meaning of life?" Can there be meaning without God? Is a happy life a meaningful life? Can an immoral life be meaningful? Does our suffering have meaning? Does death threaten meaning? What is this thing called The Meaning of Life?

provides an engaging and stimulating introduction to philosophical thinking about life's meaning. Goetz and Seachris provide the reader with accessible examples, before looking at the main theoretical approaches to meaning and key philosophers associated with them. Topics covered include: What does the question, "What is the meaning of life?", even mean? Does life

have a purpose? What is valuable? Do we matter? Does life (or my life) make any sense? Is there any meaning in suffering? Does death threaten meaning? Would immortality be good or bad news for us? With boxed summaries of key concepts and noteworthy examples, discussion questions, and suggestions for further reading included within each chapter, this book is the ideal introduction to life's meaning for philosophy students coming to the subject for the first time.

Casanova - Giacomo Casanova
2021-02-28

This is a biographical book. I had been careful, on my arrival in Bologna, to take up my quarters at a small inn, so as not to attract any notice, and as soon as I had dispatched my letters to Therese and the French officer, I thought of purchasing some linen, as it was at least doubtful whether I should ever get my trunk. I deemed it expedient to order

some clothes likewise. I was thus ruminating, when it suddenly struck me that I was not likely now to succeed in the Church, but feeling great uncertainty as to the profession I ought to adopt, I took a fancy to transform myself into an officer, as it was evident that I had not to account to anyone for my actions.

Canonical Ramsey Theory on Polish Spaces - Vladimir Kanovei 2013-09-12

This book lays the foundations for an exciting new area of research in descriptive set theory. It develops a robust connection between two active topics: forcing and analytic equivalence relations. This in turn allows the authors to develop a generalization of classical Ramsey theory. Given an analytic equivalence relation on a Polish space, can one find a large subset of the space on which it has a simple form? The book provides many positive and negative general answers to this question. The proofs feature proper forcing and Gandy-Harrington forcing, as well as partition arguments.

The results include strong canonization theorems for many classes of equivalence relations and sigma-ideals, as well as ergodicity results in cases where canonization theorems are impossible to achieve. Ideal for graduate students and researchers in set theory, the book provides a useful springboard for further research.

The Rejection of Consequentialism - Samuel

Scheffler 1994-08-11

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues

that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Kiss of Death - Lauren Henderson 2011-05-10
Scarlett thought Dan McAndrew's murder was long behind her, but when she and her classmates arrive in Edinburgh for a weeklong field trip, she's startled to be joined by her old St. Tabby's cohorts--and enemies--who are visiting the area on a field trip as well. Even more startling, Callum, Dan's surviving twin, is in the area--and his cold treatment

leaves Scarlett wondering what's changed, especially when a series of attacks makes her believe that someone's out to get her for her past mistakes. Would Callum ever hurt her, though? And what's Scarlett to make of her conflicting feelings for Callum, now that Jase isn't around? Even more upsetting, why is her most trusted confidante, Taylor, acting distant and dismissive?

Molecules and Materials takes stock of the current understanding of these various solid forms and, more particularly, of the diamond, graphite and fullerenes. After a historical background on the main properties of the element and on the latest discoveries in the field of fullerene, the chapters review the chemical and physical aspects of the allotropic forms. It describes the various properties such as thermodynamic, chemical, structural, electronic, electrical, optical and magnetic, and discusses current and potential applications. Written by scientists active in physical and chemical research on the various forms of carbon and closely related fields, the book presents a wealth of information on data and results for students and researchers interested in materials science and in the applications of advanced materials.
