**Accounting and Corporate Reporting** - Soner Gokten 2017-09-20

We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However,

is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the

today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

Accounting Information Systems - Ulric J. Gelinis 2017-10-18

Today's accounting professionals are expected to help organizations identify enterprise risks and provide quality assurance for their companies' information systems. Readers can rely on ACCOUNTING INFORMATION SYSTEMS, 11E's clear presentation to gain a thorough understanding of two issues most critical to accounting information systems in use today: enterprise systems and controls for maintaining those systems. ACCOUNTING INFORMATION SYSTEMS, 11E explores today's most intriguing accounting information systems (AIS) topics and details how these issues relate to business processes, information technology, strategic

management, security, and internal controls. The authors focus on today's most important advancements, using a conversational tone rather than complex technical language to ensure readers develop the solid foundation in AIS needed to be successful. The Internet Supply Chain - D. Chorafas  
2001-05-17

The rapid advancement of technology and of Internet commerce in a globalized market has brought change at an unprecedented rate. Credit institutions, manufacturing, merchandising and service companies are finding that their traditional methods and tools for accounting and logistics no longer suffice. They must develop more efficient processes, able to assure management control in real-time, promote transparency in accounts, and make immediate corrective action possible. The earlier

they prepare to take advantage of the Internet supply chain, the greater the benefits will be. This book focuses on the most significant developments taking place in the market, their impact on the accounting and finance function, the new efficient logistics solutions, and how new technology effects commerce. Based on an extensive research project in the US, Britain, Germany, France, Austria, Switzerland and Sweden, The Internet Supply Chain explains what can be expected in business opportunities and in cost savings from selling and purchasing through the internet. The author goes on to suggest how accounting and logistics will need to be restructured to cope with, and make the most of the challenges and benefits presented by the Internet supply chain.

Effect of ICT on Accounting Information System and Organizational Performance - J. N. Taiwo  
2018

ICT has been a major factor of efficient accounting system and great organizational performance recently. ICT has been used to

augment the reliability of accounting information and organizational performance. Accounting systems include the computer hardware and software fundamentals in recording accounting information. Organizational performance in this study was related to ability finances, ability to meet set goals and actions. However, to maximise the benefits of information technology systems, the appropriate implementation and adoption procedures have to used, or else, there is little or no impact of these technologies on the earlier mentioned variables. This study investigates empirically the impact of information technology on accounting systems and organizational performance. This study utilizes secondary data and Pearson's correlation was used for analysis using SPSS for a sample of 20 staff in financial services and other related accounting departments in Covenant University. The results of the empirical findings show that there is a significant positive relationship between ICT

system and accounting system and a significant positive relationship between ICT and organizational performance.

**Blockchain Technology** - Laine Parker 2019

Blockchain is a digital ledger that records transactions conducted between different parties in a network. This technology has the potential to be very beneficial but is not currently in the place to apply practically to the accounting field. In today's environment, blockchain is being used in many different areas of business, namely supply chain management and logistics. It is in the process of being translated into the accounting field and potentially replacing the traditional enterprise resource planning (ERP) systems the majority of companies use for accounting today. However, with certain advancements in the technology, it could significantly change accounting in the fields of tax, audit, and financial reporting. Potential applications for tax include simplifying payroll tax, transfer tax, and value added tax (VAT). However, there are no current applications of blockchain with tax as this would require significant changes in governmental regulations. There are numerous potential

changes that may impact the audit field with some scholars even suggesting fully automated audits in the future. While this may not be fully realizable, the possibility of real-time auditing is not unrealistic. Blockchain will change financial reporting in many ways but primarily by creating one version of the truth for enterprises to use. This makes the creation and reliability of financial data and statements much more straightforward for all involved parties. Overall, as blockchain continues to evolve, it will never completely take away the need for accountants, but it will certainly change the way accountants do their jobs. CPAs in particular will have new roles such as blockchain auditors, arbitrators, and moderators.

**Accounting for Alcohol** - Martin Quinn  
2018-08-23

Consumption of alcohol is a globally ubiquitous, often controversial activity, and business organizations in this sector are of significant social and economic relevance. This book draws

on accounting records from the sector to reveal fresh and unique insights into the historic development of the production of alcoholic beverages. Offering a historic overview of the three major areas of the alcohol industry - brewing, distilling and wine - this book reveals the commonalities and differences which are present in the industry, while also highlighting its social impact. The editors bring together contributions from around the world, including Mexico, France, Japan and Ireland, to demonstrate how accounting has developed over time. Offering diverse geographical and historical perspectives, it explores multiple aspects of accounting within the industry, including internal control, earnings management, competition, and regulatory aspects. The fascinating insights into breweries, wineries, spirit distillers, vineyards and other related organizations provides a unique historic perspective of accounting systems, techniques and practices. Drawing on an international

range of examples and rich archival material, this valuable research collection will be of great interest to researchers and advanced students of accounting and business history.

**Blockchain's Potential Impact On The Accounting Industry** - Anna N Griffin 2020-05-09

Technology is always evolving and creating new ways to attempt to accomplish tasks more

efficiently and effectively. One such technology is blockchain, a platform used to facilitate and verify transactions between parties. Originally, blockchain was created in 2008 to underlie the usage of Bitcoin. Blockchain is a technology that has the potential to make a large impact on many disciplines (not just in relation to cryptocurrencies), but this analysis will focus upon its use and impact on the accounting profession. This analysis addresses what a blockchain is, the different types of blockchains, and overall benefits and concerns of the technology. In addition, present uses of blockchain are discussed, and the future uses of the technology are considered for the accounting industry. When assessing the use of blockchain for accounting, possible benefits and potential concerns the technology poses are examined. While blockchain is in its infancy with professionals still trying to fully understand it, the potential it provides to impact accounting processes and accountants' roles is a very

relevant topic in the accounting field. For instance, blockchain could help accountants spend less time on reconciliations of accounts and more time on advising clients. In addition, blockchain could allow the auditing process to be continuous without the need to sample transactions periodically. Looking ahead, members of the accounting profession will have to evaluate the costs and benefits of implementing blockchain to see where it could have the most impact on their business.

Handbook of Big Data and Analytics in Accounting and Auditing - Tarek Rana

2023-02-03

This handbook collects the most up-to-date scholarship, knowledge, and new developments of big data and data analytics by bringing together many strands of contextual and disciplinary research. In recent times, while

there has been considerable research in exploring the role of big data, data analytics, and textual analytics in accounting, and auditing, we still lack evidence on what kinds of best practices academics, practitioners, and organizations can implement and use. To achieve this aim, the handbook focuses on both conventional and contemporary issues facing by academics, practitioners, and organizations particularly when technology and business environments are changing faster than ever. All the chapters in this handbook provide both retrospective and contemporary views and commentaries by leading and knowledgeable scholars in the field, who offer unique insights on the changing role of accounting and auditing in today's data and analytics driven environment. Aimed at academics, practitioners, students, and consultants in the areas of accounting, auditing, and other business disciplines, the handbook provides high-level insight into the design, implementation, and

working of big data and data analytics practices for all types of organizations worldwide. The leading scholars in the field provide critical evaluations and guidance on big data and data analytics by illustrating issues related to various sectors such as public, private, not-for-profit, and social enterprises. The handbook's content will be highly desirable and accessible to accounting and non-accounting audiences across the globe.

*The Definitive Guide to Blockchain for*

*Accounting and Business* - Saurav K. Dutta  
2020-09-30

Blockchain is a disruptive technology potentially impacting how economic transactions are recorded, stored, and verified. Despite such ramifications, there is a lack of literature discussing this from the accountant's perspective. Through real-world cases this book distills an abstract technology to relatable experiences for business professionals.
